Should you require different technical specifications, please do not hesitate to contact us.

Temperature Alarms

The AM-140 has an integrated high and low internal air temperature alarm with both audio and visual signals. The factory settings for the alarm limits are +1/-1K in relation to the set temperature: If the set temperature is altered to meet a specific storage temperature requirement then the alarm settings move in parallel and do not need to be adjusted separately. There is a 60 minute delay to avoid unwanted alarms due to e.g. door opening. The alarm parameters can however be adjusted by the user to suit individual requirements.

External Temperature and Alarm Monitoring

Check our temperature loggers for more information.

Power Failure Alarm

The AM-140 indicates a visual power failure alarm after the return of the power supply. The power failure alarm remains until it is manually reset.

Alarm, Memory and Safety Functions

The refrigerator helps to protect your inventory. This cabinet offers a variety of alarm, memory and safety features designed to greatly reduce the risk of loss of contents.

Fan switch

The interior fan ensures a constant and even interior temperature. The humidity in the appliance can be increased even further by activating the fan switch.
